

SURVEY OF PROFESSIONAL FORECASTERS

Release Date: August 9, 2019

THIRD QUARTER 2019

Forecasters See Weaker Outlook for Near-Term Growth

The U.S. economy for the next three quarters looks slightly weaker now than it did three months ago, according to 35 forecasters surveyed by the Federal Reserve Bank of Philadelphia. The panel predicts real GDP will grow at an annual rate of 1.8 percent this quarter, 2.0 percent next quarter, and 1.9 percent in the first quarter of 2020, marking downward revisions from the previous survey. On an annual-average over annual-average basis, the forecasters expect real GDP to grow 2.3 percent in 2019 and 1.9 percent in 2020. The projections for 2019 and 2020 are down from 2.6 percent and 2.0 percent, respectively, in the last survey.

A steady near-term outlook for the unemployment rate accompanies the outlook for growth. The forecasters predict the unemployment rate will average 3.7 percent in 2019 and 3.6 percent in 2020, both unchanged from the survey of three months ago. For 2021 and 2022, the panel sees the unemployment rate at 3.9 percent and 4.0 percent, respectively, projections slightly above those of the last survey.

On the employment front, the forecasters have marginally revised downward their estimates for job gains over the next two years. The projections for the annual-average level of nonfarm payroll employment suggest job gains at a monthly rate of 190,600 in 2019 and 141,200 in 2020. (These annual-average estimates are computed as the year-to-year change in the annual-average level of nonfarm payroll employment, converted to a monthly rate.)

The charts below provide some insight into the degree of uncertainty the forecasters have about their projections for the rate of growth in the annual-average level of real GDP. Each chart presents the forecasters' previous and current estimates of the probability that growth will fall into each of 11 ranges. The charts show the forecasters have revised upward their estimates of the probability that real GDP will grow below 3.0 percent in 2019. Over the following three years, the estimates of uncertainty about growth are nearly the same as those in the previous survey.

The forecasters' density projections for unemployment, shown below, shed light on uncertainty about the labor market over the next four years. Each chart presents the forecasters' current estimates of the probability that unemployment will fall into each of 10 ranges. The charts show the panelists are raising their density estimates for an unemployment rate below 4.0 percent for the next four years.

Lower Current-Quarter Headline Inflation

The forecasters expect current-quarter headline CPI inflation to average 1.9 percent, down from 2.1 percent in the last survey. Headline PCE inflation for the current quarter will be 1.7 percent, down 0.3 percentage point from the previous estimate.

The forecasters' projections for inflation other than the current-quarter headline inflation are mostly unchanged compared with the previous survey.

The long-horizon inflation projections are also holding steady. Over the next 10 years, 2019 to 2028, the forecasters expect headline CPI inflation to average 2.20 percent at an annual rate, unchanged from the previous estimate. The corresponding estimate for 10-year annual-average PCE inflation is 2.00 percent, also unchanged from the estimate of three months ago.

The charts below show the median projections (the red line) and the associated interquartile ranges (gray areas around the red line) for the projections for 10-year annual-average CPI and PCE inflation. The charts highlight unchanged projections for the long-term inflation rate, compared with those of the last survey.

The figures below show the probabilities that the forecasters are assigning to each of 10 possible ranges for fourth-quarter over fourth-quarter core PCE inflation in 2019 and 2020. For both years, the forecasters have increased the probability that core PCE inflation will be between 1.5 and 1.9 percent and have decreased the probability that core PCE inflation will be between 2.0 and 2.4 percent.

Forecasters See Lower Risk of a Negative Quarter

The forecasters have revised downward the chance of a contraction in real GDP in any of the next four quarters. For the current quarter, the forecasters predict an 11.7 percent chance of negative growth, down from 13.1 percent in the survey of three months ago.

Natural Rate of Unemployment Estimated at 4.1 Percent

In third-quarter surveys, we ask the forecasters to provide their estimates of the natural rate of unemployment — the rate of unemployment that occurs when the economy reaches equilibrium. The forecasters peg this rate at 4.10 percent. The table below shows, for each third-quarter survey since 1996, the percentage of respondents who use the natural rate in their forecasts and, for those who use it, the median estimate and the lowest and highest estimates. Thirty-three percent of the 27 forecasters who answered the question report that they use the natural rate in their forecasts. The lowest estimate is 3.88 percent, and the highest estimate is 4.60 percent.

Notes:

TBOND is the rate on 10-year Treasury bonds.
TBILL is the rate on 3-month Treasury bills.
AAA is the rate on Moody's Aaa corporate bonds.
BAA is the rate on Moody's Baa corporate bonds.

The historical values for interest rate spreads for Moody's Aaa and Baa rates are proprietary and therefore not available to the general public.

Each interest rate spread is computed as the median value of the forecasters' spreads. These median values may differ from those computed as the difference between the median values of each interest rate in the spread.
